📄 PROFILE

My path to QA wasn't linear — and that's exactly what makes me good at it. Coming from biology engineering, then moving into full-stack development and four years of technical instruction, I've learned to approach software from multiple angles: as a builder, a teacher, and a scientist. QA is where those perspectives converge. I bring structured thinking, strong documentation habits, and a genuine instinct for breaking things — backed by 250+ testing cycles and 180+ defect reports across real production environments.

📁 PROFESSIONAL EXPERIENCE

TestIO & uTest, QA Engineer - Crowdtesting 10/2025 – Present | Remote

- Executed 250+ testing cycles across web and mobile apps in production environments, aligned with client acceptance criteria.
- Filed 180+ structured defect reports with detailed reproduction steps, severity ratings, and expected vs. actual outcomes — supporting UAT phases directly.
- Validated 120+ peer-reported issues, ensuring accuracy across the full defect lifecycle.
- Contributed to 45+ user stories and test scenarios, improving test coverage and traceability.
- Worked within distributed tester teams using structured feedback and issue clarification workflows.

GoMyCode, Senior Instructor & Technical Mentor 06/2021 – 03/2025 | Tunis, On-site

- Delivered technical training to 250+ students on full-stack JavaScript — planning, preparing, and continuously updating course materials.
- Led weekly debugging workshops simulating client-facing problem resolution using Postman and browser DevTools.
- Logged and tracked 200+ issues in Jira, maintaining documentation and structured resolution workflows.
- Supported learners through API testing and integration troubleshooting — experience directly equivalent to guiding clients through UAT.
- Improved cohort-wide debugging efficiency by introducing structured validation and testing practices.

🎓 EDUCATION

Full-Stack JavaScript, GoMyCode 11/2020 – 02/2021

Industrial Biology Engineering, INSAT, Tunis 09/2013 – 10/2018

🧠 SKILLS

Testing

Manual Testing, Web & Mobile, Test Case Design, Regression Testing, BDD/TDD, Cucumber, Jest, Performance Testing (k6)

Tools

Jira, Postman, Playwright, Selenium, Karate, Browser DevTools

Development

JavaScript, TypeScript, Python, Node.js, React, Express.js, MongoDB, SQL

Methodology

Agile / Scrum, Functional Analysis, Requirements Writing, UAT Facilitation

Soft Skills

Workshop Facilitation, Stakeholder Communication, Cross-team Collaboration, Technical Documentation

📜 CERTIFICATIONS

- Automated Web Testing with JavaScript and Playwright - Udemy
- Postman API Fundamentals Student Expert Certification
- Selenium Python Automation Testing and Frameworks

📁 KEY PROJECTS

AI-Powered Bug Reporting & Ticket Automation 02/2026 – Present

- Built an AI system that generates structured bug reports from issue descriptions, with a human validation layer to ensure accuracy.
- Automated ticket lifecycle from local system to Trello — reducing manual effort and improving developer clarity.

Todo App with Drag & Drop - Full-Stack & QA Automation 2026 – Present

- Built a full-stack Todo app featuring drag & drop between designed from the ground up as a QA showcase project.
- Implemented a full Playwright test suite: login/logout, create/edit/delete todos, drag & drop flows, empty states, and error handling.
- Applied Page Object Model and auth fixtures for clean, maintainable test architecture.
- Added GitLab CI pipeline to run tests on every push with HTML reports as artifacts.

Tayar Car Scraper - Full-Stack & QA Automation 08/2025

- Developed full-stack app (React, Node.js, MongoDB) with a Puppeteer-based scraper and REST API.
- Designed end-to-end QA strategy covering API, UI, and regression testing using Postman, Karate, and Playwright.
